

FIRST FIX.

You're already paying for it: switch on what's inside your app

You pay for your field service app every month. It handles scheduling and invoices fine. But the follow-up tools inside it - the ones that catch missed calls, chase quotes, and remind customers - ship switched off. This fix is a ten-minute audit. Nothing new to buy.

THE FIX

1. **Find the missed-call text-back switch.** Open your app's phone or automation settings. Look for "missed-call text-back" or "missed-call auto-reply." Switch it on and set the reply: "Sorry we missed you, what is going on?" Every unanswered call now starts a text conversation instead of dying in voicemail.
2. **Find the quote follow-up automation.** Look for "estimate follow-up," "quote reminders," or "automated follow-up." Switch on the 24-hour check-in text. Your open quotes start chasing themselves while you are on the next job.
3. **Find the appointment reminders.** Look for "reminders" or "notifications." Switch on the day-before and morning-of texts. Fewer wasted trips, no extra effort.
4. **Test each one tonight.** Missed-call text: call your own shop number and don't pick up. Quote follow-up: send yourself a test quote. Reminders: book a fake appointment for tomorrow morning. Ten minutes and you will know every switch is live.

You may not need new software for this. Check what you already pay for before buying anything.

You're already paying for these tools every month. The only question is whether they're switched on. What's your typical job worth? Every job that slipped through one of these gaps was already paid for. What's that costing you?

Want a deeper dive? Schedule a no-cost 15-minute call and I will walk you through your biggest leak.
